StreetPro® Great Britain: up-to-date and accurate

Overview

StreetPro® Great Britain is MapInfo's premier street product designed for users who need up-to-date and accurate street detail for business analysis and for the creation of quality presentation maps.

StreetPro®

StreetPro® provides the user with real life display mapping down to street level and contains street names.

Who should use StreetPro®?

StreetPro® has been designed for MapInfo users who need a high level of precision and up-to-date street information for their mapping projects. StreetPro® applications include site selection, market potential, and customer service.

StreetPro® layers

With StreetPro®, users can select and view up to 23 layers of information:

Water

Contains sea, lakes, rivers, canals and all major bodies of water.

Land use

Contains city parks, national and regional parks and islands.

Land cover

Contains beaches, dunes, sand, woodlands, moorlands and heathland.

Urban

Contains built up areas.

Administrative Boundaries (2 layers)

Contains country and standard region boundaries.

Motorways and major roads (3 layers)

Contains motorways, major roads of high importance, other roads and secondary roads.

Streets (2 layers)

Contains connecting/local roads of major importance, local roads and destination roads.

Ferry

Contains ferry lines.

Railways

Contains railway lines.

Airports

A point file containing airports.

Business locations

A point file containing hotels, motels, restaurants, petrol stations, car dealers, car rentals and shopping centres.

Parking

Contains parking areas, parking garages and rest areas.

Public

Contains post offices, hospitals and government buildings.

Frontier

Contains frontier crossings.

Stations

A point file containing railway stations and ferry terminals.

Recreation

Contains sport stadiums, theatres, museums and casinos.

Gazetteer (3 layers)

A point file of cities and towns divided into three layers based on administration importance and population. The layers build on one another with one full layer containing all the points for easy searching.
